The Honorable Nancy Pelosi
Speaker of the House
1236 Longworth House Office Building
Washington, DC 20515

The Honorable Mitch McConnell
Senate Majority Leader
317 Russell Senate Office Building
Washington, DC 20510

The Honorable Kevin McCarthy
House Minority Leader
2468 Rayburn House Office Building
Washington, DC 20515

The Honorable Chuck Schumer
Senate Minority Leader
322 Hart Senate Office Building
Washington, DC 20510

Dear Speaker Pelosi, Leader McConnell, Leader Schumer, and Leader McCarthy:

We appreciate all your work to provide relief to the millions of Americans who are affected by the current COVID-19 pandemic. The undersigned organizations write today to ask that, as this work continues, your efforts to increase COVID-19 testing nationwide address the needs of our most vulnerable communities being hit hardest by the COVID-19 pandemic.

Sobering statistics from across the country show that COVID-19 is disproportionately impacting minority groups. African Americans account for [one third of virus cases nationwide](#), despite making up just 13% of the U.S. population. Additionally, [according to data from the Centers for Disease Control and Prevention](#), American Indians and Alaska Natives are being hospitalized for COVID at 5 times the rate of Whites. Despite comprising roughly 40% of the population in the District of Columbia, black residents account for a staggering [75% of COVID-19 deaths](#). Black Chicagoans are dying of COVID-19 [six times as often](#) as the city's white residents. In New York, Hispanics [die of COVID-19 more often](#) than any other racial or ethnic group. In South Carolina, Georgia, and Alabama, African Americans account for [more than half of COVID-19 fatalities](#), despite representing less than a third of each state's respective population. In New Mexico, where Pueblo, Apache, and Navajo Indigenous Americans comprise just [9% of the population, they represent 57% of cases](#) and see infection rates [14 times that of](#) the rest of the state. In at least 10 states Asian Americans have a case fatality rate [that is disproportionately higher](#) than the general population, and the same is true for Native Hawaiians and Pacific Islanders in 8 states.

The ongoing crisis has shined a light on existing health disparities that have left communities of color at increased risk of health complications and mortality during the COVID-19 pandemic. Minority groups already experience higher rates of chronic health conditions like diabetes, heart disease, chronic kidney disease, and lung disease that COVID-19 hospitalization and mortality data show make the virus more deadly.

Additionally, racial and ethnic minorities are overrepresented in low-income communities – more than [three in four Americans living in poverty](#) are people of color – and are less likely to have access to health insurance, transportation to a doctor's appointment, or savings to finance an emergency room visit. Minority workers are also [more likely to hold low-wage jobs](#) on the front lines of this crisis where they are more likely to be exposed to the virus, to face shortages of personal protective equipment, and to be unable to take time off should they get sick. Further, minority communities are also overrepresented in

industries [hit hardest by the economic downturn](#), making them more likely to not only lose their jobs during the pandemic, but lose their employer-sponsored health insurance too. In other words, those who are the most likely to need help during this crisis are also the least likely to have access to it.

To bridge these unjust gaps in health equity and access, we must start by bringing testing and contact tracing that is culturally and linguistically appropriate into areas and communities facing the highest risk of COVID-19 spread, complications, and mortality. It is not enough to simply make more tests available for these groups. Leaders must do more to bring the testing to these individuals, in their communities, where they work and live. We urge leaders in Congress to make resources available to meet those who are most in need where they are, including allocating funding and creating incentives for:

- Community health centers, hospitals, and nonprofit organizations in minority, low-income, and underserved communities to bring testing to those who wouldn't otherwise have access;
- These organizations to use local infrastructure, community health workers and others in their workforce, and distribution channels to increase testing in these communities; and
- Mobile testing units

It is urgently important that leaders in Congress understand that getting necessary testing and contact tracing to our most vulnerable communities requires a more targeted approach. As we work to find a path toward safely reopening the country, it is imperative that we address the needs of Americans whose health, socio-economic status, race, and zip code have put them at a disproportionately high risk of dire consequences related to COVID-19.

Sincerely,

AARP
