2023 MARCH OF DIMES REPORT CARD
ALABAMA

The preterm birth rate in Alabama was 12.8% in 2022, lower than the rate in 2021

PRETERM BIRTH GRADE

U.S. RATE 10.4
AL RATE 12.8

2012 2022
Percentage of live births born preterm

The preterm birth rate among babies born to Black birthing people is 1.5x higher than the rate among all other babies

Preterm birth rate by race/ethnicity, 2020-2022

Many factors make birthing people more likely to have a preterm birth

Preterm birth (PTB) rate among birthing people by maternal factor (blue) and overall prevalence (in parentheses), 2022

Smoking (5.4% of all births)
Hypertension (5.0% of all births)
Unhealthy weight (40.1% of all births)
Diabetes (1.6% of all births)
Previous preterm (5.4% of all births)
Carrying multiples (3.6% of all births)

Note: More than one factor can occur at the same time. Hypertension, diabetes, smoking, and unhealthy weight occur prior to pregnancy. U.S. PTB rates are as follows: smoking: 15%; hypertension: 23%; unhealthy weight: 12%; diabetes: 29%; previous preterm: 30%; carrying multiples: 62%.

© 2023 March of Dimes
The infant mortality rate decreased in the last decade; in 2021, 439 babies died before their first birthday.

Notes: API = Asian/Pacific Islander; AIAN = American Indian/Alaska Native; PTB/LBW = preterm birth and low birth weight; SUID = sudden unexpected infant death.
ALABAMA

Birthing people in Alabama have a very high vulnerability to poor outcomes and are most vulnerable due to overall physical health

MVI by county in Alabama

Factors related to maternal vulnerability
Higher scores indicate higher vulnerability

- Physical Environment: 44
- Reproductive Healthcare: 76
- Socioeconomic Determinants: 78
- General Healthcare: 80
- Mental Health and Substance Abuse: 86
- Physical Health: 96

The measures below are important indicators for how Alabama is supporting the health of birthing people

41.4
PER 100,000 BIRTHS
MATERNAL MORTALITY
This shows the death rate of birthing people from complications of pregnancy or childbirth that occur during the pregnancy or within 6 weeks after the pregnancy ends.

23.5
PERCENT
LOW-RISK CESAREAN BIRTH
This shows Cesarean births for first-time moms, carrying a single baby, positioned head-first, and at least 37 weeks pregnant.

26.3
PERCENT
INADEQUATE PRENATAL CARE
Percent of birthing people who received care beginning in the fifth month or later or less than 50% of the appropriate number of visits for the infant’s gestational age.

Notes: The Maternity Vulnerability Index (MVI) is a tool used to understand where birthing people in each state may be more likely to have poor outcomes, including preterm birth and maternal death, due to clinical risk factors and other social, contextual, and environmental factors. Visit https://mvi.surgeonteries.org/.

Adoption of the following policies and sufficient funding in Alabama is critical to improve and sustain maternal and infant healthcare

**MEDICAID EXPANSION**
State has adopted this policy, which allows birthing people greater access to preventative care during pregnancy.

**MEDICAID EXTENSION**
State has extended coverage for women to one year postpartum.

**PAID FAMILY LEAVE**
State has required employers to provide a paid option while out on parental leave.

**DOULA REIMBURSEMENT POLICY**
State Medicaid agency is actively reimbursing doula care.

**MATERNAL MORTALITY REVIEW COMMITTEE**
State has a federally funded MMRC committee, which is recognized as essential to understanding and addressing the causes of maternal death.

**FETAL AND INFANT MORTALITY REVIEW**
State has a Fetal and Infant Mortality Review team or teams to identify and review causes of death.

**PERINATAL QUALITY COLLABORATIVE**
State has a federally funded PQC to identify and improve quality care issues in maternal and infant healthcare.

**Legend**
- ✔️ State has the indicated funding/policy
- ✖️ State reimburses up to $1,500
- ✗ State is progressing legislation but not yet active
- ✗ State does not have the indicated funding/policy

**OVER 380,000 BABIES WERE BORN PRETERM IN 2022. EVERY DATA POINT REPRESENTS A PERSON WITH A UNIQUE STORY – HERE’S JUST ONE.**

At 37 years old, Ashley Taylor got pregnant after her first round of IVF. The pregnancy went smoothly until, at 18 weeks, her water broke. She was put on bed rest in the hospital to help save the pregnancy. Ashley remained there for five weeks of excruciating back pain and uncertainty—until she went into labor. Julia was born at 23 weeks and six days, weighing 1 pound, 2.3 ounces. “I knew that I loved her more than anything from the very beginning when she came into this world and they asked me, ‘What do you want to do?’ And I said, ‘Everything possible.’ And now she’s an amazing little girl with so much personality.”

Far too many families are affected by prematurity. We advocate for policies outlined in this year’s 2023 March of Dimes Report Card to prioritize the health of all families—especially moms and babies of color.
