The preterm birth rate in Hawaii was 9.8% in 2022, lower than the rate in 2021

Percentage of live births born preterm

PRETERM BIRTH GRADE

U.S. RATE 10.4
HI RATE 9.8

The presence of purple (darker color) indicates a significant trend (p <= 0.05)

The preterm birth rate among babies born to Asian birthing people is 1.2x higher than the rate among all other babies

Preterm birth rate by race/ethnicity, 2020-2022

White

Hispanic

Black

Asian/Pacific Islander

Many factors make birthing people more likely to have a preterm birth

Preterm birth (PTB) rate among birthing people by maternal factor (blue) and overall prevalence (in parentheses), 2022

Note: More than one factor can occur at the same time. Hypertension, diabetes, smoking, and unhealthy weight occur prior to pregnancy. U.S. PTB rates are as follows: smoking: 15%; hypertension: 23%; unhealthy weight: 12%; diabetes: 29%; previous preterm: 30%; carrying multiples: 62%.

The infant mortality rate decreased in the last decade; In 2021, 73 babies died before their first birthday

INFANT MORTALITY RATE

4.7

U.S. RATE

5.4

The infant mortality rate among babies born to Hispanic birthing people is 1.0x the state rate

Infant mortality rate per 1,000 live births
Rate per 1,000 live births, 2019-2021

Leading causes of infant death
Percent of total deaths by primary cause, 2019-2021

Notes: API = Asian/Pacific Islander; AIAN = American Indian/Alaska Native; PTB/LBW = preterm birth and low birth weight; SUID = sudden unexpected infant death.
**HAWAII**

Birthing people in Hawaii have a **very low vulnerability** to poor outcomes and are most vulnerable due to **reproductive healthcare access**

### MVI by county in Hawaii

![MVI Map](image)

### Factors related to maternal vulnerability

<table>
<thead>
<tr>
<th>Factor</th>
<th>Score</th>

### The measures below are important indicators for how Hawaii is supporting the health of birthing people

#### MATERNAL MORTALITY

<table>
<thead>
<tr>
<th>Rate</th>
<th>Percent</th>
</tr>
</thead>
<tbody>
<tr>
<td>18.4</td>
<td>PER 100,000 BIRTHS</td>
</tr>
</tbody>
</table>

This shows the death rate of birthing people from complications of pregnancy or childbirth that occur during the pregnancy or within 6 weeks after the pregnancy ends.

#### LOW-RISK CESAREAN BIRTH

<table>
<thead>
<tr>
<th>Rate</th>
<th>Percent</th>
</tr>
</thead>
<tbody>
<tr>
<td>24.4</td>
<td></td>
</tr>
</tbody>
</table>

This shows Cesarean births for first-time moms, carrying a single baby, positioned head-first, and at least 37 weeks pregnant.

Adoption of the following policies and sufficient funding in Hawaii is critical to improve and sustain maternal and infant healthcare

**MEDICAID EXTENSION**
State has extended coverage for women to one year postpartum.

**MEDICAID EXPANSION**
State has adopted this policy, which allows birthing people greater access to preventative care during pregnancy.

**PAID FAMILY LEAVE**
State has required employers to provide a paid option while out on parental leave.

**DOULA REIMBURSEMENT POLICY**
State Medicaid agency is actively reimbursing doula care.

**MATERNAL MORTALITY REVIEW COMMITTEE**
State has a federally funded MMRC committee, which is recognized as essential to understanding and addressing the causes of maternal death.

**FETAL AND INFANT MORTALITY REVIEW**
State has a Fetal and Infant Mortality Review team or teams to identify and review causes of death.

**PERINATAL QUALITY COLLABORATIVE**
State has a federally funded PQC to identify and improve quality care issues in maternal and infant healthcare.

**Legend**
- ✔️ State has the indicated funding/policy
- ✔️ State reimburses up to $1,500
- ✖️ State is progressing legislation but not yet active
- ❌ State does not have the indicated funding/policy

**OVER 380,000 BABIES WERE BORN PRETERM IN 2022. EVERY DATA POINT REPRESENTS A PERSON WITH A UNIQUE STORY – HERE’S JUST ONE.**

At 37 years old, Ashley Taylor got pregnant after her first round of IVF. The pregnancy went smoothly until, at 18 weeks, her water broke. She was put on bed rest in the hospital to help save the pregnancy. Ashley remained there for five weeks of excruciating back pain and uncertainty—until she went into labor. Julia was born at 23 weeks and six days, weighing 1 pound, 2.3 ounces. “I knew that I loved her more than anything from the very beginning when she came into this world and they asked me, ‘What do you want to do?’ And I said, ‘Everything possible.’ And now she’s an amazing little girl with so much personality.”

Far too many families are affected by prematurity. We advocate for policies outlined in this year’s 2023 March of Dimes Report Card to prioritize the health of all families—especially moms and babies of color.
