2022 MARCH OF DIMES REPORT CARD SUPPLEMENTAL REPORT

The 2022 Supplemental Report Card dives deeper into many of the data points found on the Report Card. The first page describes a state’s progress towards the National Healthy People (HP) 2030 data-driven objectives related to pregnancy and childbirth. With continued focus on the many structural, systemic, and environmental factors that influence the health of mothers and babies, especially for Black, Native American, and Hispanic people, the second and third pages of the Supplemental Report Card separates the data by race and ethnicity to provide a powerful tool to identify health disparities. Starting on the fourth page, the report presents a summary of March of Dimes programmatic initiatives to improve maternal and infant health in each state.

UTAH

National data-driven objectives from Healthy People 2030¹ were set by the U.S. Department of Health and Human Services with the goal of improving health and well-being over the next decade. Several HP 2030 objectives are specific to the prevention of pregnancy complications and maternal death and improvements to women’s health before, during and after pregnancy.

The graphs below show where Utah falls for each selected objective, including preterm birth, infant mortality, unhealthy weight before pregnancy and low-risk Cesarean birth. A star is displayed on the right of each individual component if the state has met the objective.

<table>
<thead>
<tr>
<th>OBJECTIVE</th>
<th>HP TARGET</th>
</tr>
</thead>
<tbody>
<tr>
<td>Preterm birth</td>
<td>Less than 9.4 preterm births per 100 live births</td>
</tr>
<tr>
<td>Infant mortality</td>
<td>Less than 5.0 infant deaths per 1000 live births</td>
</tr>
<tr>
<td>Unhealthy weight before pregnancy*</td>
<td>Less than 52.9% of women will have an unhealthy weight before pregnancy</td>
</tr>
<tr>
<td>Low-risk Cesarean birth</td>
<td>Less than 23.6% of low-risk women have Cesarean deliveries</td>
</tr>
</tbody>
</table>

* HP 2030 objective measures “healthy weight before pregnancy”; unhealthy weight was used to better align with other measures.

Preterm birth is a birth with less than 37 completed weeks of gestation, based on obstetric estimate of gestational age. Infant mortality is death of an infant before 1 year of age. Low-risk Cesarean birth is a Cesarean birth when the baby is a single infant, positioned head-first, the mother is full-term (at least 37 weeks), and has not given birth prior. Unhealthy weight before pregnancy is a body mass index less than 18.5 or 30 and above.

THE 2022 MARCH OF DIMES REPORT CARD: STARK AND UNACCEPTABLE DISPARITIES PERSIST ALONGSIDE A TROUBLING RISE IN PRETERM BIRTH RATES

March of Dimes recommends state policy actions that are rooted in addressing disparities in maternal and infant health outcomes, see www.marchofdimes.org/reportcard

SELECTED OUTCOMES IN UTAH: PRETERM BIRTH AND CLINICAL MEASURES

Many structural, systemic and environmental factors influence the health of mothers and babies, especially for Black, Native American and Hispanic people. This page describes preterm birth by geographical location and other clinical measures by maternal race and ethnicity in Utah using detailed race and ethnicity categories. By first understanding where differences exist, we can then move forward to advocate for changes towards health equity.

### PRETERM BIRTH RATES BY COUNTIES

### INFANT MORTALITY RATE BY RACE AND ETHNICITY

Per 1000 Live Births

- **Asian/Pacific Islander**: 9.3
- **Hispanic**: 6.8
- **White**: 5.0

### LOW-RISK CESAREAN BIRTH RATES BY RACE AND ETHNICITY

Percent

- **Black**: 28.0
- **Asian/Pacific Islander**: 26.3
- **American Indian/Alaska Native**: 24.6
- **Hispanic**: 21.5
- **White**: 17.9

### INADEQUATE PRENATAL CARE BY RACE AND ETHNICITY

Percent of Live Births

- **Black**: 25.5
- **American Indian/Alaska Native**: 23.5
- **Asian/Pacific Islander**: 17.3
- **Hispanic**: 15.0
- **White**: 8.0

RACE AND ETHNICITY IN UTAH: LIVE BIRTHS AND PRETERM BIRTHS

This data fact sheet describes the nuances of the racial and ethnic makeup of mothers in Utah using detailed race and ethnicity categories. Information for live births and preterm births is presented to highlight groups who account for large proportions of live births and also experience an increased risk of premature birth.

LIVE BIRTHS
Percentage of Live Births by Mother’s Race and Ethnicity

- There were 46,712 babies born in 2021.
- 72.3% of births were to White mothers. This accounted for the highest percentage of total live births in 2021.
- 0.8% of all live births were to American Indian/Alaska Native. This accounted for the lowest percentage of total live births in 2021.

PRETERM BIRTHS
Percentage of Live Births Born Preterm by Mother’s Race and Ethnicity

- 4,621 babies were born preterm in 2021.
- Cuban had the highest preterm birth rate between the years 2019-2021.
- 1 in 10 babies were born too soon
March of Dimes leads the fight for the health of all moms and babies, no matter who they are, where they live or what they can afford. We’re advocating for policies to protect them. We’re working to improve the health care they receive. We’re pioneering research to find solutions. We’re supporting families with programs, knowledge and tools to have healthy pregnancies. By uniting communities, we’re helping families everywhere get the support and care they need and donors from around the world champion our work.

Anyone who wants to join in the fight for the health of all birthing people, babies and their families can support our Office of Government Affairs by becoming an advocate. Advocates advance our efforts through supporting our work to influence legislation, policy and regulation at the federal and state level. From extending postpartum Medicaid coverage in states across the country, to passing protections for pregnant workers to establishing Maternal Mental Health Advisory Committees, March of Dimes’ advocate efforts are making an impact.

March of Dimes funds and supports research grants for translational and actionable projects across the country that lead directly to interventions or prevention for mom and baby health. The research goal is to turn observations in the laboratory, clinic and community into interventions, therapeutics and devices that improve the health of moms and babies with an eye towards characterizing disparities in key research areas. Our current research focuses on late, spontaneous preterm birth, racial inequities as they relate to morbidity and mortality outcomes for mothers and babies, cardiovascular health conditions developed or exacerbated during pregnancy and maternal stress, its impact on pregnancy outcomes and how to mitigate the effects.
