

LOW DOSE BIG BENEFITS NEWSLETTER COPY:

We're supporting March of Dimes' Low Dose, Big Benefits initiative to raise awareness for health professionals and those at risk of preeclampsia that taking low dose aspirin (also called baby aspirin) throughout pregnancy can provide big benefits, giving moms and babies the healthy start they deserve.

Preeclampsia affects 1 in 25 pregnancies in the US, with potential negative impacts on mom and baby from pregnancy through delivery, and even across their lifespans. If you're pregnant or plan to be, ask your healthcare professional if you've been screened for preeclampsia and if low dose aspirin is right for you.
